

NOTHERS
THE AWARD STORE®

- Simple to use
- Requires no maintenance
- Safe and cost effective
- Variety of colour options
- Unnoticed until required!

FIRE AND EMERGENCY EVACUATION AWARENESS

During an emergency, the safety and care of occupants is of prime importance. Our evacuation systems are designed to be a quick and easy verification system to indicate room status.

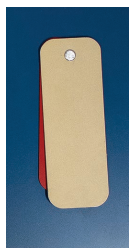

While checking the status of the room the indicators are moved to vacant position. If the door is re-entered they will indicate re-entry by returning to their original position. This process eliminates duplicate efforts of searching a facility.

FE-100 EVACUFLEX

The flex system combines a flexible webbing fabric, solid plastic reflective patch and a round magnet. This specific system works only with metal door frames.

Installation is recommended at 22" from the floor (below heat and smoke level).

FE-200 EVACUFLIP

The flip system combines two pieces of plastic fastened with a single screw at the top. This system works on any type of door or door frame.

Installation is recommended at 22" from the floor (below heat and smoke level).

FOR USE IN:

- Hospitals
- Nursing homes
- Hotels
- Resident retirement homes
- Schools
- Office towers
- Apartment complexes

TYPES OF EMERGENCY EVACUATIONS:

- Fire
- Gas leak
- Bomb threat
- Flood
- Missing persons
